SUMMARY

Generative AI Engineer with experience building and shipping AI-powered systems and products. I work mainly with Python, FastAPI, and TypeScript, with a focus on agentic workflows, RAG, automation, and backend systems. My experience includes building production systems for incident automation, developing full-stack AI applications, and creating open-source developer tools.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Go, SQL

AI Frameworks & Tools: AutoGen, LangGraph, LangChain, Google ADK, AI SDK, Qdrant, Pinecone, Prompt Engineering, MCP, RAG, LLMs, Claude Code, OpenAI Codex

Backend & Data: FastAPI, Flask, REST APIs, PostgreSQL, MSSQL, Redis, MongoDB, SQLite, Node.js, Express

Frontend & Platform: Next.js, React, TanStack Start, Effect TS, AWS Lambda, Google Cloud, Docker, Kubernetes, Cloudflare, Grafana Loki, GitLab CI/CD, CI/CD

WORK EXPERIENCE

Tata Consultancy Services

Nov 2024 – Oct 2026

AI Engineer

Chennai, TN

- Built Python-based production incident automation that integrates **Grafana Loki** anomaly signals with ServiceNow REST APIs, cutting operational MTTR by 63%.
- Reduced average incident resolution time from 25-30 minutes to 6-8 minutes by integrating a **Qdrant-backed RAG** context-engineering process into a multi-agent incident-resolution workflow.
- Led **migration** of a monolithic Next.js frontend (50+ modules) to a **micro-frontend architecture**, halving build time and raising deployment throughput 2.5x.
- Partnered with the Google Cloud team to ship a platform representing TCS at **Google Cloud Next 2026**, showcasing 120+ AI offerings to Google and TCS sales teams.
- Owned CI/CD across infrastructure, sales, and business-analysis teams, supporting 25+ production deploys/month with zero critical rollbacks.

PROJECTS

PROFESSIONAL

Agentic AMS Platform

Feb 2025 – Oct 2026

Python, AutoGen, FastAPI, MCP, Qdrant, Grafana Loki, ServiceNow

Case Study

- Designed a **FastAPI and Microsoft AutoGen** multi-agent system that detects, diagnoses, and remediates production failures through MCP-enabled tool calling.
- Built an observability agent that ingests **Grafana Loki** alerts over WebSockets, deduplicates ServiceNow tickets, and runs document ingestion, chunking, embeddings, and semantic retrieval through a Qdrant RAG index.
- Implemented a **Planning-Executor-Validator** agent workflow with human-in-the-loop approval for infrastructure rollbacks, structured validation, and automated pod health checks.

Google GTM Portal Jan 2026 – Apr 2026
Python, Next.js, FastAPI, GCS, Google Cloud Case Study

- Architected a typed FastAPI and Google Cloud Storage catalog backend with a Next.js frontend, delivering sub-second loads and a 96% Lighthouse score.
- Implemented **hybrid keyword and vector retrieval** to improve discovery across a catalog of 120+ AI offerings.

OPEN SOURCE

Ascendant Sep 2025 – Oct 2026
Python, TypeScript, Effect TS, Agent Skills Docs

- Built local-first astrology SDKs in **Effect TS** (astro-ascendant, 600/week peak) and Python (PyPI) for deterministic chart computation with typed errors, dependency injection, and concurrent pipelines.
- Shipped **Agent Skill** with **Claude Code**, **Codex**, and **OpenCode** plugins for setup and analysis workflows that ground LLM output in computed data.

Cortex Apr 2026 – May 2026
Effect TS, TypeScript, Pinecone, Qdrant Docs

- Authored an Effect-native **vector database ORM** with structured concurrency, typed dependency injection, and compositional error handling.
- Shipped provider adapters (Zvec, PageIndex) so multi-tenant RAG pipelines stay portable across vector backends.
- Raised batch insert throughput to 3.2x baseline using non-blocking batch stream pipelines on Pinecone and Qdrant.

Retail Platform Jul 2024 – Jun 2026
Go, Next.js, AWS Lambda, Cloudflare D1, Workers GitHub

- Designed 7 event-driven **Go microservices** on AWS Lambda (search, recommendations, notifications, orders) behind a Next.js admin/CMS for 200+ products.
- Used Cloudflare Edge caching, D1 databases, and Workers to absorb **10k req/min spikes**, cutting **p99 API latency from 450ms to 85ms**.

ACHIEVEMENTS

- OSS Contributor to Vercel (ai-elements), OpenCode, and mattpocock/skills.
- Selected for the **XERJ Corpus Hub**: ascendant-agents is indexed as a curated reference implementation for AI coding agents (Profile).
- Open Source Impact: astro-ascendant reached **600 npm downloads** with a mirrored Python package on PyPI.
- TCS Special Recognition Award (2025) for standout performance in the company-wide AI Ignite Hackathon.

CERTIFICATIONS

Claude Certified Developer: Foundations *Anthropic* Oct 2026

MCP for Production Automation *HuggingFace* Jun 2025

Advanced React *Meta* Feb 2024

EDUCATION

Amrita Vishwa Vidyapeetham Sep 2020 – May 2024
B.Tech, Computer Science and Engineering Paper

- Research: Complex or Irregular Lung Nodule Detection from Computed Tomography Scans.
